

Job offer

ip-label is a software vendor which specializes in measuring user quality of experience on all digital services. ip-label solutions provide insights for managing the availability, response times, and performance of any type of application (web, business, mobile, voice, video, etc.).

These solutions enable the businesses which are ip-label's customers to optimize the quality of their applications, services, and infrastructures throughout the world (over 1000 customers).

A leading player in the APM (Application Performance Management) market, ip-label also offers consulting services to assist businesses in optimizing the performance of their information systems: performance audits, diagnostics of malfunctions, and load testing.

ip-label is a fast-growing SME on a human scale (a workforce of over 100 worldwide). It has been recognized as an 'Innovative Enterprise' by the ANVAR (the French national agency which rewards excellence in research) and, in keeping with this recognition, devotes significant R&D efforts to designing and producing new solutions in its field of expertise.

With a direct presence in France, Spain, China, Tunisia, Sweden, and Finland, and a network of certified partners in other parts of the world, ip-label is the European frontrunner in its market segment.

To sustain its growth ip-label is recruiting:

A technical infrastructure deployment engineer to handle deployment of our metrology systems for internal and external customers.

Job description

You will join a team of 3 reporting to the deployment project leader.

After initial training in deploying our measurement probes in our own data center or on customer premises, gradually you will be expected to take part in managing deployment projects. In this capacity you will:

- participate in technical scoping meetings of projects
- take part in ensuring the supply of hardware needed for projects, liaising with the purchasing department
- schedule deployment projects under the responsibility of the project leader, taking into consideration customer and internal constraints

- ensure that the deployment schedule is met
- play a direct part in installing equipment
- validate technical acceptance by checking the system's operation prior to handover to internal or external operations teams

Skills

- expertise in the operation of Windows and Linux systems is a must (network configuration, settings, active directory integration, etc.)
- knowledge of virtualization (Xen, ESX, etc.)
- knowledge of networks (problem analysis, Wireshark traces)
- knowledge of VPN configuration is a plus

Profile

You hold a graduate degree (5-year university or engineering school) and enjoy maintaining good customer relationships. You feel able to jointly lead project scoping meetings. You have solid knowledge of technical architectures and information systems and networks.

Driver's license (Permis B) is required; expect occasional business travel in France and to neighboring countries in Europe.

Fluent English.

Why choose ip-label?

- To work with customers in the top 10 of their industry: global leaders in luxury goods or automobiles, or purely web players in e-retail, video, and online services.
- Digital transformation, mobility, cloud computing: your job revolves around these topics which are shaping the economy.

Join us to become a specialist in user quality of experience ("QoE")!
